

Sensitizing the students for healthy and green environment

One of the mottos of our school is to make green living a part of every day school life by considering the environment in everything we do. To make our school more Eco-Friendly and sustainable we adhere to certain strategies and policies like-

- Promoting and increasing use of sustainable modes of transport for school journey by students.
- Motivating them to switch the food habits to green and organic for which we organise health week in the month of April.
- Helping them to sort out waste by placing separate bins for biodegradable and non- biodegradable waste.
- Encouraging them to recycle as much things they can. We organise activities like –Best out of Waste to promote and encourage the usefulness of recycling.
- Making them friendly with natural world by dedicating a patch of school nursery for growing vegetables. The Students of eco club sow the seeds of seasonal vegetables and take care of various aspects of gardening.
- Getting children to bring in old objects and up cycle them into new creation.
- Celebrating environment and earth week to address a wide variety of environmental issues. We celebrate Earth week in our school in the month of April which encompasses various activities like assembly talk, Poster making , Paper bag making, Street Plays etc.
- Turning them into energy efficient eco-saviours. Developing better understanding in them to use energy and water sustainably.
- Using alternative sources of energy. Our school has installed a small solar panel to run certain appliances during power-cuts.
- Replacing the products used for cleaning the schools by natural and Eco-Friendly ones to reduce asthma and allergy flare ups.
- Promoting cleanliness of school and surroundings as a part of celebrating Swachh Bharat Abhiyan . We keep the mission & motto of Swachh Bharat Abhiyan alive throughout the year.
- Rain Water Harvesting Plant installed in our School helps in saving the run off water.
- We also have a compost pit in the nursery of the school to convert organic waste generated in the school into manure.

School buildings, food , waste even school curriculum supports a connection to and appreciation for the environment.
